%
% File:      chukchi_deponents_theorem.pdf
% Purpose:   Theorem dumps from the file chukchi_deponents.dtr.
%           This file contains outputs from the fragment
%           chukchi_deponents.dtr: 92 word forms of the verb
%           'to defend' and associated morphosyntax. The
%           syntactic query nodes in chukchi_deponents.dtr
%           provide information on syntactic transitivity,
%           person and number of the absolutive argument,
%           and - if transitive - person and number of the
%           ergative argument. These are taken to be
%           generated by syntax.
%           As well as the associated word form (<mor word>)
%           this file shows additional information which can be
%           inferred from the values for the absolutive and
%           ergative arguments. We have also included the
%           the values for <syn arg1> and its extensions, and
%           <mor transitivity>. The person and number of
%           <syn arg1> is identical to that of <syn abs-arg>
%           except in the case of the transitive deponents
%           using the antipassive forms. These will also have
%           a mismatch between syntactic transitive (trans) and
%           morphological transitivity (antipass1/antipass2).
%           For example, see the values associated with Word40,
%           which is transitive but has the form
%           n- ine - wiriŋ -turi.
%
% % % % % % % % % % % % % % % % % % % % % % % % % % % % % %
